

# Evaluating perennial pasture mixes for climate resilience

Visit the Pasture 365 focal research site at Hagley

Join Tasmanian Pasture 365 lead Rowan Smith for an introduction to the project and a walkover the mixed pasture plots that were sown in October 2025. The project is examining whether some pasture species mixes can be more resilient to extended and more regular periods of dry times. Rowan will discuss key observations including differences in species establishment, weed competition and summer growth.

Pinion Advisory and the Southern Australia Livestock Research Council (SALRC) are holding two additional events on Tuesday 3 February following this field walk.

**TIME**

10.00am–12.00pm
